Altering Human Genetics Through Vaccinations

Please Share This Story!

Just as a few Big Tech companies control media exposure on the earth, so to will a few Big Pharma companies control the genetic future of planetary citizens. Technocrats are outside of all ethical and moral bounds, bent on the ‘science of social engineering.’ - TN Editor

The National Institute of Allergy and Infectious Diseases (NIAID) has launched efforts to create a vaccine that would protect people from most flu strains, all at once, with a single shot.

Over the years, I’ve written many articles refuting claims that vaccines are safe and effective, but we’ll put all that aside for the moment and follow the bouncing ball.

Massachusetts Senator and big spender, Ed Markey, has introduced a bill that would shovel no less than a billion dollars toward the universal flu-vaccine project.

Here is a sentence from an NIAID press release that mentions one of several research approaches:

“NIAID Vaccine Research Center scientists have initiated Phase 1/2 studies of a universal flu vaccine strategy that includes an investigational DNA-based

vaccine (called a DNA ‘prime’)...”

This is quite troubling, if you know what the phrase “DNA vaccine” means. It refers to what the experts are touting as the next generation of immunizations.

Instead of injecting a piece of a virus into a person, in order to stimulate the immune system, synthesized genes would be shot into the body. This isn’t traditional vaccination anymore. It’s gene therapy.

In any such method, where genes are edited, deleted, added, no matter what the pros say, there are always “unintended consequences,” to use their polite phrase. The ripple effects scramble the genetic structure in numerous unknown ways.

Here is the inconvenient truth about DNA vaccines—

They will permanently alter your DNA

The reference is the New York Times, 3/15/15, “*Protection Without a Vaccine.*” It describes the frontier of research—the use of synthetic genes to “protect against disease,” while changing the genetic makeup of humans. This is not science fiction:

“By delivering synthetic genes into the muscles of the [experimental] monkeys, the scientists are essentially re-engineering the animals to resist disease.”

“‘The sky’s the limit,’ said Michael Farzan, an immunologist at Scripps and lead author of the new study.”

“The first human trial based on this strategy — called immunoprophylaxis by gene transfer, or I.G.T. — is underway, and several new ones are planned.” [That was three years ago.]

“I.G.T. is altogether different from traditional

vaccination. It is instead a form of gene therapy. Scientists isolate the genes that produce powerful antibodies against certain diseases and then synthesize artificial versions. The genes are placed into viruses and injected into human tissue, usually muscle.”

Here is the punchline: “The viruses invade human cells with their DNA payloads, and the synthetic gene is incorporated into the recipient’s own DNA. If all goes well, the new genes instruct the cells to begin manufacturing powerful antibodies.”

Read that again: “the synthetic gene is incorporated into the recipient’s own DNA.”

Alteration of the human genetic makeup.

Not just a “visit.” Permanent residence. And once a person’s DNA is changed, he will live with that change—and all the ripple effects in his genetic makeup—for the rest of his life.

The Times article taps Dr. David Baltimore for an opinion:

“Still, Dr. Baltimore says that he envisions that some people might be leery of a vaccination strategy that means altering their own DNA, even if it prevents a potentially fatal disease.”

Yes, some people might be leery. If they have two or three working brain cells.

This is genetic roulette with a loaded gun. Anyone and everyone on Earth injected with a DNA vaccine will undergo permanent and unknown genetic changes...

And the further implications are clear. Vaccines can be used as a cover for the injections of any and all genes, whose actual purpose is re-engineering humans in far-reaching ways.

The emergence of this Frankenstein technology is paralleled by a shrill push to mandate vaccines, across the board, for both children and adults. The pressure and propaganda are planet-wide.

The freedom and the right to refuse vaccines has always been vital. It is more vital than ever now.

It means the right to preserve your inherent DNA.

I wonder what WordPress rule was “broken.”

They can just give everyone Beta Glucans/mega vitamin c/zinc/vit d etc. etc. and stop wasting money on further unnecessary research. But of course (wink wink) we know why they want to “save us” (or say they do.)

A further question is whether this type of gene therapy enters the biological transfer of modified gene material to the next generation(s)
